Introduction

The article presents new data on *Bryodemella tuberculata* in Lithuania. Since 2019 it is included into List of animals, plants and fungi species protected in Lithuania (LR aplinkos ministro įsakymas..., 2018).

Material and Methods

One specimen of *Bryodemella tuberculata* was caught using a standard entomological net in the Rūdninkai former military area (Šalčininkai administrative district). Photos were taken (Fig. 1), and the specimen was released.

List of localities

Locality	Administrative district	Coordinates (LAT, LONG)
Rūdninkai former military area	Šalčininkai district	54.386595, 25.101175

List of species

Bryodemella tuberculata (Fabricius, 1775)

Rūdninkai former military area, 09 07 2019, 1 spec.

Fig. 1. *Bryodemella tuberculata* in Rūdninkai former military area.

Discussion

The first data on *Bryodemella tuberculata* in Lithuania are records from the first half of the 20th century. Several specimens of this grasshopper were collected in Pabradė environs (Švenčionys administrative district) (Budrys & Pakalniškis, 2007). It was found in the same location 80 years later, in 2008 (Budrys *et al.*, 2008).

In 2019, one specimen of *Bryodemella tuberculata* was observed in Rūdninkai former military area (Šalčininkai administrative district). It is the second locality inhabited by this very rare species in Lithuania.

Acknowledgements

Special thanks to my daughter Aistė Ūsaitytė for her help in catching this grasshopper.

Nauji duomenys apie margojo tarkšlio (*Bryodemella tuberculata* (Fabricius, 1775), Orthoptera: Acrididae) paplitimą Lietuvoje

T. ŪSAITIS

Santrauka

Straipsnyje pateikiami nauji duomenys apie margojo tarkšlio *Bryodemella tuberculata* (Fabricius, 1775) paplitimą Lietuvoje. Iki šiol ši rūšis buvo žinoma tik iš Pabradės apylinkių (Švenčionių raj.). 2019 m. vienas margasis tarkšlys *Bryodemella tuberculata* (Fabricius, 1775) buvo pagautas Rūdninkų kariniame poligone. Tai yra antra šios rūšies radavietė Lietuvoje.
