

SPECIES OF STAPHYLINIDAE (COLEOPTERA) NEW TO THE FAUNA OF LITHUANIA

VIDMANTAS MONSEVIČIUS

Biodiversity Research Centre, Laižuvos 3-39, LT-85357 Akmenė, Lithuania.

E-mail: vidmantas521@yahoo.lt

Introduction

Rove beetles (Staphylinidae) is the largest beetle family in Lithuania. In the catalog of beetles of Lithuania (Tmutis *et al.*, 2011) 812 species of rove beetles were indicated. A further fifty species are listed in later sources (Ferenca *et al.*, 2011, 2016, Ivinskis *et al.*, 2013, 2014, 2015, 2017, Lekoveckaitė *et al.*, 2019, Monsevičius, 2013, Pacevičius, 2017, 2019, Tamutis, 2012). The article provides data on 22 species of rove beetles that are new to the fauna of Lithuania.

Material and Methods

The material was collected by the author of this paper during the period from 2002 to 2020 in Akmenė and Mažeikiai districts (northern Lithuania). The beetles were collected by sifting leaf-litter, moss, rotten wood, flood debris from littoral of riversides or pond banks, compost, dung, decaying mushrooms etc. The beetles from sifted substrates were extracted in thermoelectors.

The following sources were used to identify the species: Assing, 1998, 2009a, 2009b, Assing & Schülke, 2011, Assing & Vogel, 2019, Benick & Lohse, 1974, Brundin, 1944, 1953, Cuccodoro & Löbl, 1997, Franz & Besuchet, 1971, Gildenkov, 2015, Klimaszewski *et al.*, 2018, Lee & Ahn, 2018, Likovský, 1974, Lohse, 1974, Muona, 1991, Palm, 1970, Zerche, 1998.

Taxonomy of beetles follows that of the Catalogue of Palaearctic Coleoptera (Schülke & Smetana, 2015). Photos of the structures, important for the identification of the species, were made by the author. The material is deposited in the personal collection of the author.

List of localities

Locality	Administrative district	Coordinates (LAT, LONG)
Akmenė (1)	Akmenė district	56.25000, 22.73944
Akmenė (2)	Akmenė district	56.24639, 22.71750
Akmenė (3)	Akmenė district	56.25028, 22.73806

List of species

PROTEININAE

Megarthrus nitidulus Kraatz, 1858 (Fig. 1)

Renavas, 21 08 2018, 1 spec., in decaying organic matter; Viliošių miškas f. (2), 06 08 2015, 4 spec., in decaying mushrooms.

Comments. This species is distributed throughout most of the Palaearctic region (Cuccodoro & Löbl, 1997). Known from Latvia, Estonia (Silfverberg, 2010), Poland (Kubisz & Melke, 1993).

ALEOCHARINAE

Aleochara grandeguttata Assing, 2009 (Fig. 2)

Akmenė (2), 14 12 2018, 1♂; Kamanos Nat. R. (1), 01 07 2002, 1♂. In decaying organic matter.

Comments. This species was described on material from Hungary, Turkey and Armenia (Assing, 2009a). Known also from Romania and Ukraine (Assing, 2011a, 2018a). According to V.B. Semenov *et al* (2015) *Aleochara grandeguttata* is widely distributed and known from Austria, Slovakia, Moldavia, Belarus, European Russia, North Ural, West and East Siberia.

Aleochara paeziana Lohse, 1961 (Fig. 4)

Dabikinėlė (2), 22 12 2019, 1♂; Dabikinėlė (3), 26 12 2019, 1♂1♀; Dabikinėlė (4), 18 10 2019, 1♂; Dabikinėlė (5), 1♀; Skretiškė (2), 17 12 2019, 1♀, in cow dung.

Comments. This species is known from Armenia, Austria, Czech Republic, Denmark, Finland, Germany, Italy, Norway, Poland, Slovakia, Slovenia, Sweden, Switzerland (Schülke & Smetana, 2015), Russia (Kaliningrad) (Assing, 2009a).

Oxypoda nigrocincta Mulsant & Rey, 1875 (Fig. 5)

Kadagiai (2), 20 09 2019, 1♂2♀, in leaf-litter of riverside overgrown by *Salix* scrubs.

Comments. Known from Austria, Belgium, Bosnia Herzegovina, Croatia, Czech Republic, France, Great Britain, Germany, Italy, Slovakia (Schülke & Smetana, 2015), Russia (Moscow Province) (Semenov, 2008).

Oxypoda soror C.G. Thomson, 1855 (Fig. 3)

Akmenė (3), 27 09 2019, 2♀, in decaying mushrooms.

Comments. This species is widespread in Europe, but rare (Assing, 2018b). Known from Latvia, Estonia (Silfverberg, 2010), Belarus (Solodovnikov, 2012), Poland (Burakowski *et al.*, 1981).

Meotica filiformis (Motschulsky, 1860) (Fig. 6)

Akmenė (5), 03 03 2019, 1♂; Dabikinėlė (7), 1♂; Kamanos Nat. R. (3), 06 04 2019, 2♂; Padvarėlių miškas f. (3), 01 11 2019, 1♀; Renavas (2), 21 11 2019, 1♀; Skretiškė (1), 22 12 2019, 1♀; Skretiškė (3), 11 11 2019, 1♀; Viliosiai (5), 20 04 2019, 2♂; Viliosiai (6), 11 11 2019, 1♂. Habitat: leaf-litter in riverine scrubs, mixed deciduous and coniferous forests, mixed swamp forests.

Comments. Confirmed distribution are Norway, Sweden, Finland, Denmark, British Isles, Spain, France, Belgium, Germany, Switzerland, Austria, Czech Republic, Ukraine (Assing & Vogel, 2019). Also it was reported from Latvia, Estonia (Silfverberg, 2010), Belarus (Alexandrovich *et al.* 1996), Poland (Renner & Messutat, 2007).

Dilacra luteipes (Erichson, 1837) (Fig. 7)

Pavirytė, 07 07 2013, 1♀, sifted from drift material of river margin.

Comments. This species is widespread in West Palaearctic. Known from the neighbouring countries: Estonia (Silfverberg, 1910), Belarus (Aleksandrowich *et al.*, 1996), Poland (Burakowski *et al.*, 1981).

Dochmonota clancula (Erichson, 1837) (Fig. 8)

Dabikinėlė (6), 13 11 2019, 1♀; Kadagiai (1), 24 04 2019, 1♂; Kamanos Nat. R. (2), 07 09 2014, 1♂; Padvarėlių miškas f. (2), 16 02 2020, 1♂; Viliosiai (1), 10 09 2014, 1♀; Viliosiai (2), 09 07 2014, 1♂; Viliosiai (3), 13 12 2019, 1♂; Viliosiai (4), 20 02 2020, 2♀. Habitat: leaf-litter in riverine and fen scrubs, deciduous forests, *Alnus* swamp forests, leaf-litter near the margins of pond.

Comments. Europaen-Siberian species. Known from the neighbouring countries: Estonia, Latvia (Silfverberg, 2010), Belarus (Derunkov & Melke, 2001), Poland (Burakowski *et al.*, 1981).

***Philhygra tmolosensis* (Bernhauer, 1940) (Fig. 9)**

Dabikinėlė (8), 16 03 2020, 1♂, in leaf-litter in a mixed forest near a seasonally flooded meadow.

Comments. This species is known from Austria, Czech Republic, Denmark, Germany, Hungary, Sweden, Turkey (Schülke & Smetana, 2015). Also it was reported from Belarus (Aleksandrowich *et al.*, 1996) and Russia (Moscow province) (Semenov, 2008).

***Atheta boreella* Brundin, 1948 (Fig. 10)**

Viliošių miškas f. (1), 01 08 2015, 1♂, on carrion; Viliošių miškas f. (2), 06 08 2015, 1♂, in decaying mushrooms.

Comments. This species was reported from many countries in North and Central Europe and Mongolia. There are four records from Poland (Plewa *et al.*, 2019).

***Atheta picipennoides* Hanssen, 1932 (Fig. 11)**

Dabikinėlė (2), 20 12 2019, 1♂, in cow dung.

Comments. This species was reported from Austria, Central and North European Rusia, Estonia, Norway, Sweden (Schülke & Smetana, 2015), Finland (Rassi.*et al.*, 2015).

***Atheta fungivora* (Thomson, 1867) (Fig. 13)**

Akmenė (3), 09 09 2018, 2♂, in decaying mushrooms.

Comments. This rare species is widely distributed in Europe and North Africa. It was reported from Kampinos National Park in Poland (Sawoniewicz, 2013).

***Trichiusa immigrata* Lohse, 1984 (Fig. 14)**

Akmenė (1), 10 10 2016, 5 spec., 16 08 2018, 1 spec., 10 10 2019, 1 spec.; Akmenė II, 26 10 2018, 3 spec., 29 03 2019, 2 spec., 21 04 2019, 12 spec.; Dabikinėlė (2), 26 10 2019, 1 spec.; Padvarėlių miškas f. (7), 11 04 2019, 1 spec.; Pakabučiai, 14 10 2018, 1 spec.; Renavas, 21 08 2018, 28 spec. Habitat: synantropic habitats (compost, heaps of straw, haystacks) also in cow dung.

Comments. Invasive species originating from North America (Ødegaard, 1999). The first European specimens were found in 1975 ((Lohse & Lucht, 1989). Currently known from most European countries. From neighboring countries recorded from Poland (Melke, 1996) and Belarus (Derunkov, 2016).

***Acrotona pseudotenera* (Cameron, 1933) (Fig. 15)**

Akmenė (1), 16 08 2018, 2♂1♀, 12 09 2018, 1♀, 14 02 2019, 7 spec., 04 03 2019, 1♀, 10 10 2019, 2♂1♀; Akmenė II, 19 02 2019, 1♂1♀, 21 04 2019, 1♀; Dabikinėlė (1), 19 04 2019, 1♂; Padvarėlių miškas f. (1), 16 02 2020, 1♂; Pakabučiai, 14 04 2019, 1♀; Skretiškė (1), 22 12 2019, 1♂1♀. Habitat: compost, decaying grain, haystacks, heaps of straw, cow dung.

Comments. Alien species originating from Far East (Ødegaard, 1999). In Europe it was first found in 1988 in Finland (Ødegaard, 1999) and it is also known from Austria, Belgium, Belarus, Czech Republic, Denmark, Finland, Germany, Norway, Slovakia, Switzerland, Central European Russia (Schülke & Smetana, 2015), Poland (Renner & Messutat, 2007).

***Oligota parva* Kraatz, 1862 (Fig. 12)**

Padvarėlių miškas f. (5), 16 11 2019, 6 spec.: Padvarėlių miškas f. (6), 29 09 2018, 4

spec., 15 11 2018, 4 spec.; Renavas (1), 21 08 2018, 1 spec. Habitat: decaying grain and other decaying organic matter.

Comments. This species probably introduced from South America in nineteenth century (Ødegaard, 1999). Cosmopolitan species widely distributed in Europe. In neighboring countries recorded from Estonia (Silfverberg, 2010), Poland (Burakowski *et al.*, 1981), Belarus (Solodovnikov, 2012).

OXYTELINAE

Carpelimus lindrothi (Palm, 1947) (Fig. 16)

Padvarėlių miškas f. (2), 19 06 2019, 1♂, in leaf-litter in a *Pinus sylvestris* bog forest.

Comments. Palaearctic species. Known from neighbouring countries: Latvia, Estonia (Silfverberg, 2010), Poland (Renner & Messutat, 2007), Belarus (Gildenkov, 2015).

SCYDMAENINAE

Neuraphes carinatus (Mulsant & Rey, 1861) (Fig. 17)

Žerkščiai, 12 05 2013, 1♀, in leaf-litter of deciduous forest.

Comments. This species is distributed in Central Europe and Central European Russia (Nikitsky & Legalov, 2016). In neighbouring countries recorded from Estonia (Silfverberg, 2010) and Poland (Burakowski *et al.*, 1978).

PSEUDOPSINAЕ

Pseudopsis sulcata Newman, 1834 (Fig. 18)

Akmenė (4), 17 02 2020, 1 spec., in decaying organic matter.

Comments. Rare West Palaearctic species (Zerche, 1992). Known from Poland (Burakowski *et al.*, 1979).

PAEDERINAE

Pseudomedon obscurellus (Erichson, 1840) (Fig. 21)

Akmenė (1), 10 10 2019, 1♀, in decaying organic matter.

Comments. This species is distributed in the Western Palaearctic region (from Madeira, Northwest Africa, and the Iberian Peninsula eastwards to the Turkey and the Caucasus region) (Assing, 2009b). In neighbouring countries recorded from Latvia (Silfverberg, 2010), Estonia (Roosileht, 2015), Belarus (Solodovnikov, 2010), Poland (Burakowski *et al.*, 1979).

Pseudomedon obsoletus (Nordmann, 1837) (Fig. 20)

Kadagiai (1), 24 04 2019, 1♀, in leaf-litter at the edge of a pond.

Comments. This species is known from the Western Palaearctic region (including Middle Asia), from the Iberian peninsula eastwards to Kazakhstan (Assing, 2009b). In neighbouring countries recorded from Latvia (Silfverberg, 2010), Estonia (Roosileht, 2015), Belarus (Solodovnikov, 2010), Poland (Burakowski *et al.*, 1979).

Tetartopeus zetterstedti (Rye, 1872) (Fig. 19)

Dabikinėlė (6), 13 11 2019, 4♂2♀; Dabikinėlė (8), 16 03 2020, 2♀; Dabikinėlė (9), 13 04 2020, 1♀; Kadagiai (2), 20 09 2019, 1♀; Kadagiai (3), 16 04 2019, 1♂3♀; Kadagiai (4), 13 10 2019, 2♀; Kadagiai (5), 01 02 2020, 1♀; Kadagiai (6), 18 04 2020, 1♀; Skretiškė (4), 13 02 2020, 1♂1♀. Habitat: seasonally flooded meadows, leaf-litter in riverine *Salix* scrubs, flood debris along a river margin.

Comments. North Palaearctic species. It is distributed from France, the British Isles, and Scandinavia to Russian Far East (Assing, 2011b). Known from Latvia, Estonia (Silfverberg, 2010), Kaliningrad (Russia), Poland (Burakowski *et al.*, 1979).

STAPHYLININAE

***Gauropterus fulgidus* (Fabricius, 1787) (Fig. 22)**

Akmenė (1), 31 12 2016, 1 spec.; Akmenė (4), 18 09 2018, 2 spec. Habitat: decaying organic matter.

Comments. Widespread Palaearctic species. In neighboring countries recorded from Latvia, Estonia (Silfverberg, 2010), Belarus (Solodovnikov, 2010), Poland (Burakowski *et al.*, 1980).

Naujos Lietuvos faunos trumpasparnių vabalų (Coleoptera, Staphylinidae) rūšys

V. MONSEVIČIUS

Santrauka

Publikacijoje pateikiami duomenys apie 22 naujas Lietuvos faunos trumpasparnių vabalų (Coleoptera, Staphylinidae) rūšis, aptiktas 2002, 2013-2016, 2018-2020 metais Akmenės ir Mažeikių rajonuose. Nurodomas šių rūsių paplitimas Europoje ir kaimyninėse šalyse, pateikiami duomenys apie kiekvienos rūšies radimo datą ir vietą, nurodomas aptiktų individų skaičius Surinkta medžiaga saugoma autoriaus asmeninėje kolekcijoje.
